

“ Australian made by Richmond ensures the best you can get ”

## RESPECTED. RELIABLE. RICHMOND.

No matter the project, Richmond can provide the solution. With over 57 years of experience, Richmond's engineering team can accommodate all custom configurations, capacities and design requirements. Contact Richmond today to build an Australian made solution.

Richmond provides a vast range of high quality aviation support products. Being experts in making products for all manner of ground support equipment we can develop a solution for you. We provide wheels & castors for airport docking equipment, engine stands, tooling stands; high capacity towing castors, replacement parts for airport ground support trailers & commander loaders, and a whole range of other support products.

Our world class engineering team will work to create the perfect solution for your aviation support needs.

At Richmond we develop products for a huge range of applications, but ground support is where we truly excel. As wheelmakers for industry we have great expertise in creating, high quality, and high-capacity solutions. Our extensive range of wheels, castors, materials handling products, and custom engineering solutions have an endless number of applications: from pallet jacks used commonly by the military, to heavy duty trolleys developed for use when transporting and servicing turrets used in tanks. No matter your configuration, capacity or design requirements. Richmond can develop a solution.

When it comes to the docking, building, or transporting of ship parts, Richmond has the solution. We design products suited for all manner of naval ship building applications. These include slipway rollers, track & flange wheels used in ship building/repairs, polyurethane wheels & rollers, and much more. Our high quality range of products can be found everywhere, from heavy industrial applications to existing naval projects.

Our solutions are custom engineered, ensuring you get the highest quality solution best suited to your requirements.
